

rocr::AMD::MemoryRegion
::BlockAllocator::alloc

rocr::AMD::MemoryRegion
::Allocate

rocr::AMD::MemoryRegion
::AllocateImpl

```
graph LR; A[rocr::AMD::MemoryRegion::BlockAllocator::alloc] --> C[rocr::AMD::MemoryRegion::AllocateImpl]; B[rocr::AMD::MemoryRegion::Allocate] --> C;
```

The diagram illustrates a function pointer or virtual dispatch mechanism. On the left, two separate boxes represent different entry points or interfaces: the top one for `rocr::AMD::MemoryRegion::BlockAllocator::alloc` and the bottom one for `rocr::AMD::MemoryRegion::Allocate`. On the right, a single shaded box represents the actual implementation, `rocr::AMD::MemoryRegion::AllocateImpl`. Two blue arrows point from the left boxes to the right box, indicating that both interfaces are implemented by the same underlying function.
