

rocr::Addr::V2::Gfx9Lib
::HwlComputeCmaskAddrFromCoord

rocr::Addr::V2::Gfx9Lib
::HwlComputeDccAddrFromCoord

rocr::Addr::V2::Gfx9Lib
::HwlComputeHtileAddrFromCoord

rocr::Addr::V2::CoordEq
::solve

```
graph LR; A[rocr::Addr::V2::Gfx9Lib  
::HwlComputeCmaskAddrFromCoord] --> D[rocr::Addr::V2::CoordEq  
::solve]; B[rocr::Addr::V2::Gfx9Lib  
::HwlComputeDccAddrFromCoord] --> D; C[rocr::Addr::V2::Gfx9Lib  
::HwlComputeHtileAddrFromCoord] --> D;
```

The diagram illustrates a dependency or mapping where three distinct functions from the `rocr::Addr::V2::Gfx9Lib` namespace are resolved to a single function in the `rocr::Addr::V2::CoordEq` namespace. The source functions are `::HwlComputeCmaskAddrFromCoord`, `::HwlComputeDccAddrFromCoord`, and `::HwlComputeHtileAddrFromCoord`. The target function is `::solve`. Blue arrows indicate the direction of the mapping from each source to the target.
