```

The diagram illustrates a mapping from four specific hardware compute information structures to a single library function. On the left, four white rectangular boxes are stacked vertically. Each box contains a fully qualified C++ namespace and class name. Blue arrows originate from the bottom-right corner of each of these four boxes and point towards a single gray rectangular box on the right. This gray box also contains a fully qualified C++ namespace and class name. The arrows indicate that each of the four source structures is associated with or passes data to the target function.
