

rocr::amd::hsa::loader
::LoadedCodeObject

```
graph BT; A[rocr::amd::hsa::loader::LoadedCodeObjectImpl] --> B[rocr::amd::hsa::loader::LoadedCodeObject];
```

The diagram illustrates an inheritance relationship between two C++ classes. At the bottom is a white box representing the base class, `rocr::amd::hsa::loader::LoadedCodeObjectImpl`. A blue arrow points upwards from this box to a gray box at the top, which represents the derived class, `rocr::amd::hsa::loader::LoadedCodeObject`. This visualizes that `LoadedCodeObjectImpl` inherits from `LoadedCodeObject`.
